Digital Butler

DIGITAL ACCESS CONTROL AND
TARGETED CUSTOMER INFORMATION

Contact-free access control

CREATE TRUST

Managing waiting room traffic becomes easier with the Digital Butler. The culturally universal signals transcend language barriers and are easily understood. Equal and fair treatment of customers is apparent, which will ensure everyone stays calm and seated while waiting. This pragmatic solution will create trust and improve the image of the company.

SUSTAINABLE MULTISYSTEM

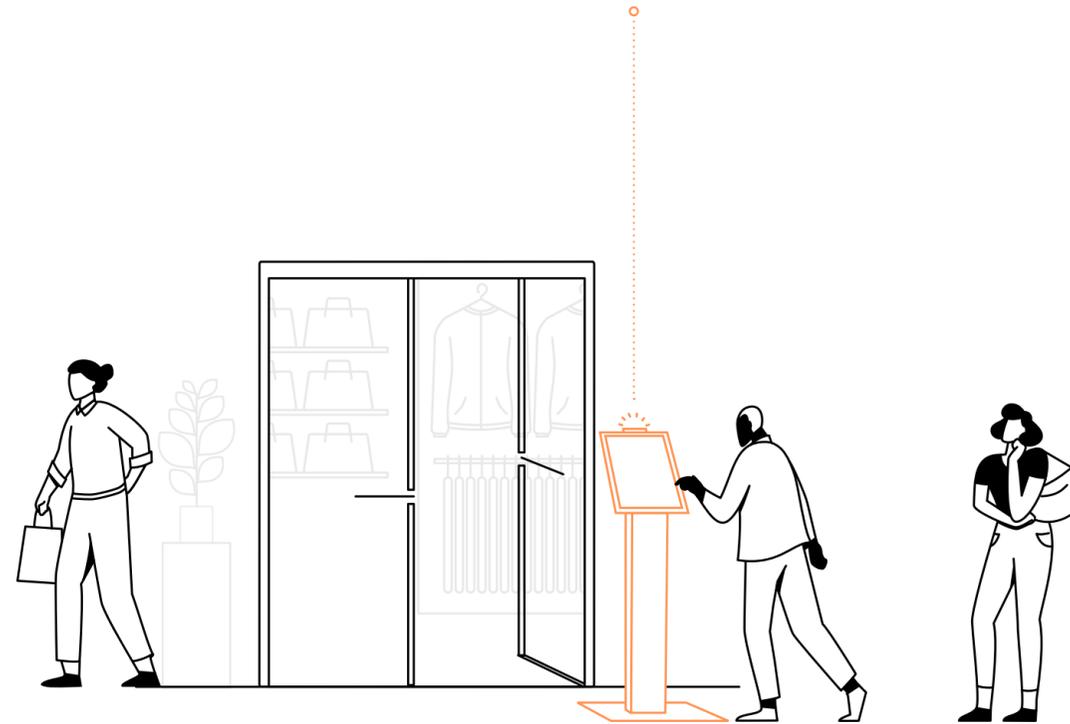

The system utilizes the same software platform as our other digital solutions. The consistency in look and function is a value-added service for you and your customer.

UNIQUE FUNCTIONALITY

Extensions such as an optional disinfectant dispenser or the integration into existing digital solutions further increase the functionality.

SAFETY INCREASES, STRESS & COST DECREASE

Avoid additional employment of security personnel. Our solution conveys security and relieves the team through controlled access control.

EASY INSTALLATION & A GOOD SERVICE

System set-up is quick and easy. Simply plug the unit into the power socket and follow a short set-up video. However, if you need assistance a customer service representative will happily assist you by phone until your machine is ready to use. From installation to troubleshooting and more, our team will always be happy to help.

INTUITIVE HANDLING

Experience a hassle-free start-up with the simple interface and the control panel accessible at anytime. Activate either desired signals with a single click: green to enter, or red to wait. These controls are accessible via computers or mobile devices- switch the signal anywhere, at anytime.

ADDED FUNCTIONALITY: ADDED VALUE

The touchscreen control tower can also be used as a self-service station. Utilize the Digital Butler as a way to promote special offers or additional services. The software updates with ease, so new messaging can be displayed in seconds.

MAKE THE MOST OF WAITING TIME

Engage your customers as they wait with a rotating slideshow of current promotions, service information or message from your team. With a predetermined start and stop time, the slides can run continuously during business hours- ensuring you are communicating with your customers from the moment they enter until the moment they exit. Our ready-to-use templates are quickly updated with your information, or you can simply create your own.

ALWAYS CONNECTED

A WLAN independent internal connection is integrated. The LTE router provides a reliable connection between your control panel devices and the Digital Butler.

*Depending on the local internet bandwidth.

ADD-ONS

We are continuously developing and improving our products to best serve you. Upon your request, we will send you updates on our new integrated disinfectant dispense or the sensor-activated access control.

WAIT OR COME IN?

Your customers will not be left guessing. The green or red LED lights accompanying the appropriate text ensures your message is clear and easily understood.

TWO ATTRACTIVE DESIGNS

The Digital Butler is made of high-quality steel and available in two colors: white or charcoal, both with a black frame around the screen.

ADDITIONAL CONTENT

Additional messaging and content can also be displayed to your customers as they wait. Choose from ready-to-use templates or create a completely customized layout with ease.
